Indonesian crash investigators stated in a recently published report that a series of failures by Boeing led to the fatal Lion Air Flight 610, one of two Boeing 737 Max aircraft to crash in a short period of time.

Internal Boeing messages between test pilots suggest that the aircraft manufacturer knew of issues facing the 737 Max fleet, later involved in two disastrous crashes, as early as 2016.

Reports suggest that airlines are leasing 30-year-old planes to replace the grounded Boeing 737 Max fleet. One industry expert compared older planes to “gold dust,” due to their increase in value.

The European Aviation Safety Agency announced this week that it will not defer to the FAA’s ruling on the safety of Boeing’s troubled 737 Max fleet.

Inside information from a Boeing whistleblower suggests that the aircraft manufacturer ignored an internal report that demanded safety upgrades for the 737 Max fleet.

Shares of Boeing are getting hammered following revelations that the company may have misled regulators.
